## Key subjects:

- ▶ **4.0 Industry and industry future:** from fragmentary automation to new business models. How can you make a profit from the up-and-coming digital revolution in the industrial sector?
- ▶ **The future is already here:** from intelligent automation and data analysis to the digital transformation of a manufacturing enterprise.
- ▶ **Successful experiences from business leaders:** operating IIoT solutions for quality improvement and a reduction in expenses.
- ▶ **Robotic devices in servicing and manufacturing enterprises:** prospective profit and ROI. How should a proper model for your manufacturing enterprise be chosen?
- ▶ **Additive manufacturing and fictions about it being cost-based.** Does a company need its own 3D-printing machine / scanner?
- ▶ **From big data to smart data:** using Big Data to create real advantages for business.
- ▶ **Cloud solutions:** How do they support innovations? Which new sources of profit do clouds and big data make for IIoT?
- ▶ **Challenges of new reality – provision of cyber security.** How can your corporate data be secured?
- ▶ **Items of standardization:** Advanced developments of open sources and standards.
